# Objectives

- ▶ Improve visual assessment skills of dermatoses
- ▶ Review diagnostic criteria for several dermatoses
- ▶ Provide a venue for discussing diagnosis and treatment of dermatoses

# Case 1

- ▶ 23 y/o WF with 2 wk h/o severe itching on the hands and arms
- ▶ Not helped with otc hydrocortisone
- ▶ No new soaps or detergents
- ▶ Recently stayed in a hostel while visiting Mexico.

© 2009 VisualDX

© 2012 VisualDX

# Scabies

- ▶ Finger webspace involvement
- ▶ Linear burrows
- ▶ Severe pruritis
- ▶ Difficult to get positive scraping
- ▶ Need to treat household contacts

## Case 2

- ▶ 32 y/o WM with several month onset of mildly pruritic, erythematous papules and plaques on back, exts
- ▶ Father with similar condition

# Psoriasis

- ▶ Erythematous, thick plaques with silvery scale
- ▶ Classically on elbows, knees, gluteal cleft
- ▶ Rx: topical steroids, Dovonex, mtx, biologics

## Case 3

- ▶ 82 y/o WF with painful, erythematous papule
- ▶ Onset over months
- ▶ Numerous, similar erythematous papules on face, forearms and dorsal hands
- ▶ Sig sun tanning hx

# Squamous cell carcinoma

- ▶ Sun-exposed skin
- ▶ Some with features of keratoacanthoma
- ▶ Tmt: excision, CXD, Efudex
- ▶ Counseling re: sun protection important

## Case 4

- ▶ 16 y/o WF with new and worsening outbreak of asmp tx bumps on forehead
- ▶ Some pustules around the perioral area
- ▶ Few around the chest and upper back

# Acne vulgaris

- ▶ 1<sup>st</sup> line tmt: topical benzoyl peroxide or witch hazel
- ▶ 2<sup>nd</sup> line: add topical antibx (clindamycin)
- ▶ 3<sup>rd</sup> line: add topical retinoid (teratogenic)
- ▶ 4<sup>th</sup> line: add systemic antibx for 3 months only (along with topical tmt)
- ▶ 5<sup>th</sup> line: systemic retinoid

## Case 5

- ▶ 58 y/o WM with h/o erythematous confluent red papules on bilat cheeks, nose
- ▶ Not sig helped with hcts
- ▶ Worse in sun
- ▶ Eye irritation and sensitivity

© 2013 VisualDx

© 2019 VisualDx

# Acne rosacea

- ▶ 1st line tmt: metronidazole cream
- ▶ 2<sup>nd</sup> line: doxycycline 50-100mg BID x 3 months
- ▶ Ask about ocular symptoms (refer to ophthal)
- ▶ Strict sun protection
- ▶ Treat for demodex (permethrin)
- ▶ Ivermectin

## Case 6

- ▶ 43 y/o AAM awoke with swollen, painful upper lip
- ▶ Otherwise healthy male
- ▶ No other skin findings

# Angioedema

- ▶ Deep dermal and subcutaneous swelling
- ▶ Often pale and or thel painful
- ▶ Can occur with or without wheals
- ▶ Different entity than urticaria
- ▶ Need to find underlying cause, but most often this is idiopathic
- ▶ Can be fatal

# Case 7

- ▶ 64 y/o WM with numerous roughened, slightly itchy red papules with sandpaper texture
- ▶ Sig sun exposure working in construction

# Actinic keratosis

- ▶ Typically occurs in sun-exposed skin
- ▶ Can be diffuse
- ▶ Tmts: cryotherapy, topical fluorouracil, ingenol mebutate

# Case 8

- ▶ 56 y/o male dev'd symmetric indurated purple plaques of her soles.
- ▶ Asymptomatic
- ▶ New lesion in the mouth
- ▶ H/o HIV

# Kaposi's sarcoma

- ▶ Virally-associated disease (HHV-8)
- ▶ 4 variants:
  1. Classic KS
  2. African endemic KS
  3. KS in iatrogenically immunocompromised pts
  4. AIDs-related epidemic KS
- ▶ Classic KS usually develops in Jewish men of Eastern European origin or among men of Mediterranean heritage (primarily Italian).

## Case 9

- ▶ 72y/o WM with 1 week h/o painful, pruritic papules and plaques
- ▶ Otherwise healthy
- ▶ No other lesions elsewhere
- ▶ Working in garden

© 2009 VisualDX

© 2014 VisualDX

# Sporotrichosis

- ▶ Most common in tropical and subtropical climates
- ▶ Rose thorns
- ▶ Painless nodules distal extremity
- ▶ Travels along lymphatics
- ▶ Skin bx
- ▶ Itraconazole 200mg qd 3-6 months
- ▶ Terbinafine 500mg BID

## Case 10

- ▶ 6 year old with asymptomatic papule on the face
- ▶ New papules appearing on stomach

# Molluscum contagiosum

- ▶ Lesions are firm, umbilicated, pearly papules
- ▶ Waxy surface
- ▶ Occur anywhere but most common in skin folds and genital region
- ▶ Can be associated with immunosuppression
- ▶ Most papules resolve spontaneously
- ▶ Rx: CxD, LN, chemovesicants, topical keratolytics, cantharidin

# Case 11

- ▶ 53 y/o W
- ▶ f with 1 month h/o asymptx lesion on the leg
- ▶ Very healthy and well
- ▶ Lives in Australia

# Metastatic amelanotic melanoma

- ▶ Malignant melanoma can look like anything!
- ▶ Bx, bx, bx!

## Case 12

- ▶ 43 y/o WF with 2 month h/o pruritic rash on feet
- ▶ H/o DM
- ▶ Became worse with otc hydrocortisone

# Tinea pedis

- ▶ Can be asymptx
- ▶ Scaling, erythematous, well-defined
- ▶ “Moccasin-distribution”
- ▶ Dystrophic, yellow-green nails
- ▶ Systemic tmt for 3 months if nails involved

© 2019 VisualDx

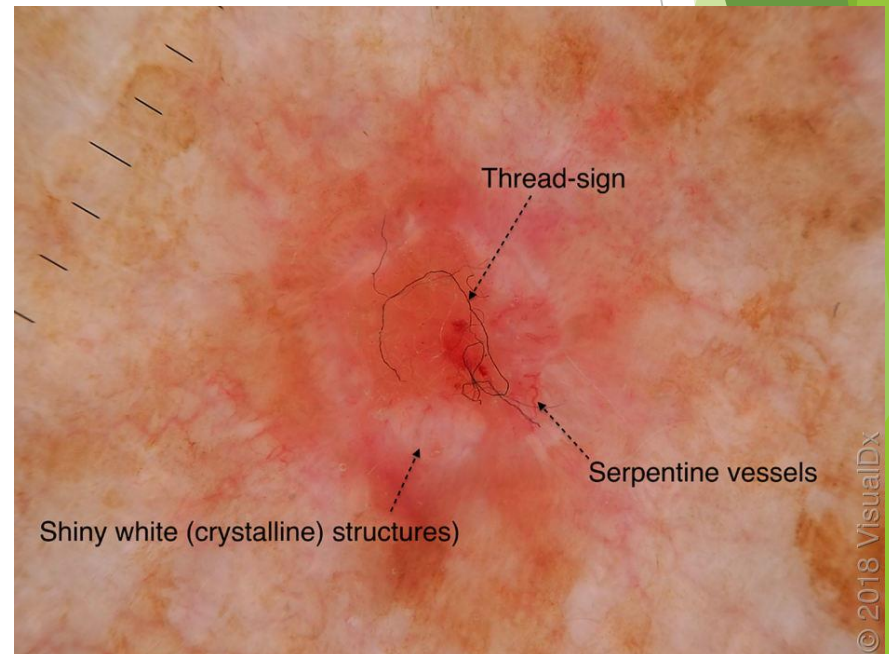

© 2019 VisualDx

© 2019 VisualDx

# Case 13

- ▶ 73 y/o WF with one month h/o painless papule
- ▶ Bleeds easily
- ▶ No h/o trauma or injury
- ▶ No other similar lesions elsewhere

# Basal cell carcinoma

- ▶ Most common skin cancer
- ▶ “Pearly, rolled border”
- ▶ Usually found in sun-exposed skin
- ▶ Treated with Cx<sub>2</sub>D, excision
- ▶ Sun avoidance counseling important

© 2013 VisualDx

© 2019 VisualDx

# Case 14

- ▶ 73 y/o WM with 2 day h/o violaceous macules and patches on bilat feet
- ▶ Painful
- ▶ PMH: htn, DM, hyperlipidemia, renal disease
- ▶ Recently hospitalized to r/o MI

# Cholesterol emboli

- ▶ Coumadin blue toe syndrome
- ▶ Abrupt onset
- ▶ Distal extremities, esp. legs
- ▶ Men age 50+
- ▶ Frequently undiagnosed
- ▶ Arterial/coronary cath, prolonged coagulation, acute thrombolytic activity given for MI or CVA
- ▶ Tmt is supportive/surgical by-pass

# Case 15

# Herpes Simplex Virus

- ▶ Whenever you see a vesicular process, you need to think HSV or zoster
- ▶ Can be disseminated
- ▶ Tzank prep demonstrates multi-nucleated giant cells

# Case 16

- ▶ 56 y/o WM with several day h/o pruritic papules which developed into vesicles
- ▶ Located on lower legs
- ▶ Otherwise healthy and well
- ▶ No h/o heart disease
- ▶ No meds

© 2019 VisualDX

© 2019 VisualDX

# Arthropod bites

- ▶ Erythematous papules that can become vesicles, ulcers and even necrotize
- ▶ Breakfast-lunch-dinner
- ▶ Think about topical tmt as well as systemic

© 2012 VisualDx

© 2009 VisualDx

# Case 17

- ▶ 26 y/o WF with 2 week onset of asymptx plaque
- ▶ Seen in ECU earlier in the month and dg'd with strep throat

# Fixed Drug Reaction

- ▶ Usually occur 1-2 weeks after first exposure
- ▶ Can appear anywhere on the body but favor the lips, face, hands, feet and genitalia
- ▶ Upon re-administration of the causative drug, the lesions recur at exactly the same sites.
- ▶ Drugs: sulfonamides, NSAIDs, barbiturates, TCN, carbamazepine.

# What's under the scope?

# Case 18

- ▶ New red bump in 74 y/o Wm
- ▶ No h/o skin ca
- ▶ Healthy otherwise

# Cherry angioma

© 2009 VisualDX

© 2011 VisualDX

© 2009 VisualDX

# Case 19

- ▶ 54 y/o AAM with h/o DM, HTN, and CAD
- ▶ Developed tan/grey rash in both axillae and groin
- ▶ Numerous skin tags in these areas as well as comedones

# Acanthosis Nigricans

- ▶ Velvety hyperpigmentation of intertriginous surfaces
- ▶ Traditionally associated with internal malignancy and DM
- ▶ Treat underlying disorder
- ▶ Recurrence of AN signals recurrence of malignancy

## Case 20

- ▶ 78 y/o WF developed slight edema in R arm along with formation of blisters suddenly
- ▶ Overall healthy but noted fatigue, slight fever and extreme pruritis

# Bullous pemphigoid

- ▶ Most common autoimmune subepidermal blistering disease
- ▶ Primarily seen in elderly
- ▶ Chronic disease with spontaneous exacs/remissions
- ▶ Antigens targeted by antbds are components of junctional adhesion complexes for the skin and mucosa
- ▶ Dx: DIF
- ▶ RX: systemic steroids, cyclosporin, mtx, Cellcept

# Case 21

- ▶ 25 y/o WM developed red, asymptx rash on R upper back suddenly
- ▶ Previously healthy and well other than chronic back pain from MVA
- ▶ Rash not helped with otc HCTS

# Erythema ab igne

- ▶ Toasted skin syndrome or fire stains
- ▶ Localized areas of reticulated erythema and hyperpigmentation
- ▶ Usually related to heat
- ▶ Risk of scca

## Case 22

- ▶ 27 y/o Wm developed erythematous, mildly pruritic, red patches and plaques on dorsal hands
- ▶ No h/o other skin disorders
- ▶ No contactants or other exposures

© VisualDx/Richard P. Usatine, MD

© 2019 VisualDx

# Granuloma Annulare

- ▶ Two-thirds of pts with GA are under 30 y/o.
- ▶ Erythematous annular plaques
- ▶ Etiology unclear: trauma, insect bite, TB skin test, sun exposure, PUVA, Viral infx
- ▶ Self-limiting
- ▶ 60% on hands and arms
- ▶ IL or topical steroid

# Case 23

- ▶ 57 y/o WF developed painful, pruritic rash on R upper back and arm over several days
- ▶ Numerous vesicles along with papules
- ▶ Babysits 3 y/o grandchild who is healthy

# Herpes Zoster

- ▶ “Shingles”
- ▶ Painful and pruritic
- ▶ Dermatomal pattern
- ▶ Exposure to HSV, varicella
- ▶ Can treat with anti-virals but mostly supportive therapy

The background features abstract, overlapping geometric shapes in various shades of green, ranging from light lime to dark forest green. These shapes are primarily located on the left and right sides of the frame, creating a modern, layered effect. The central area is a plain white space where the text is located.

# The End

(Thank God that's over with!)
