

Skin Manifestations of Systemic Disease

Kara N. Roman, MMS, PA-C
Associate Program Director and
Assistant Professor
George Fox University PA Program

Skin, Bones, Hearts and Private Parts
Conferences Series 2024

Learning Objectives

- Recognize common dermatologic conditions associated with systemic disease.
- Use dermatologic findings to assist in the diagnosis of systemic disease.
- Provide appropriate patient education regarding the relevance of dermatologic findings as the manifestation of systemic disease to the patient.
- Offer useful next steps to assist in the diagnosis of systemic disease when dermatologic conditions are recognized.

“Mirror, mirror on the wall, why should I pay attention to the skin at all?”

- Early and late signs of systemic diseases
- Complications of a disease or its treatment
- Reflection of internal conditions
 - Can reveal the secrets of all other body systems
 - Pulmonary
 - CV
 - GI
 - Renal
 - MS/Rheumatologic
 - Endocrine
 - Nervous
 - Internal malignancies

Pulmonary System

- Cyanosis
- Clubbing - hypertrophic osteoarthropathy
 - One of the oldest signs in clinical medicine, first described by Hippocrates in 460 BC

Pulmonary Conditions with Skin Findings

- Sarcoidosis
- Lung cancer
- Interstitial lung disease
- TB
- CF
- Lung abscess, empyema, bronchiectasis
- Mesothelioma

Sarcoidosis

Systemic Lupus Erythematosus

- Young to middle-age women
- Skin involvement in 80%
- American College of Rheumatology criteria for diagnosis
 - 4 criteria including at least one clinical criterion and one immunological
 - Biopsy-proven lupus nephritis and ANA or anti-ds-DNA antibodies
- Can be drug-induced
 - Procainamide, hydralazine, isoniazid

SLE Laboratory Findings

- Antinuclear antibodies (ANA) +
- Anti-dsDNA +, anti-Sm antibodies
- False positive VDRL
- Anemia, leukopenia, thrombocytopenia, low complement, urinary findings
- Lupus band test

SLE Treatment

- Sunscreen
- Antimalarials – gold standard
 - Hydroxychloroquine
- Topical, intralesional, systemic steroids
- Other immunosuppressives
 - Methotrexate
 - Biologic therapies
- Treat secondary infections
- Most common cause of death – renal and CNS

Scleroderma

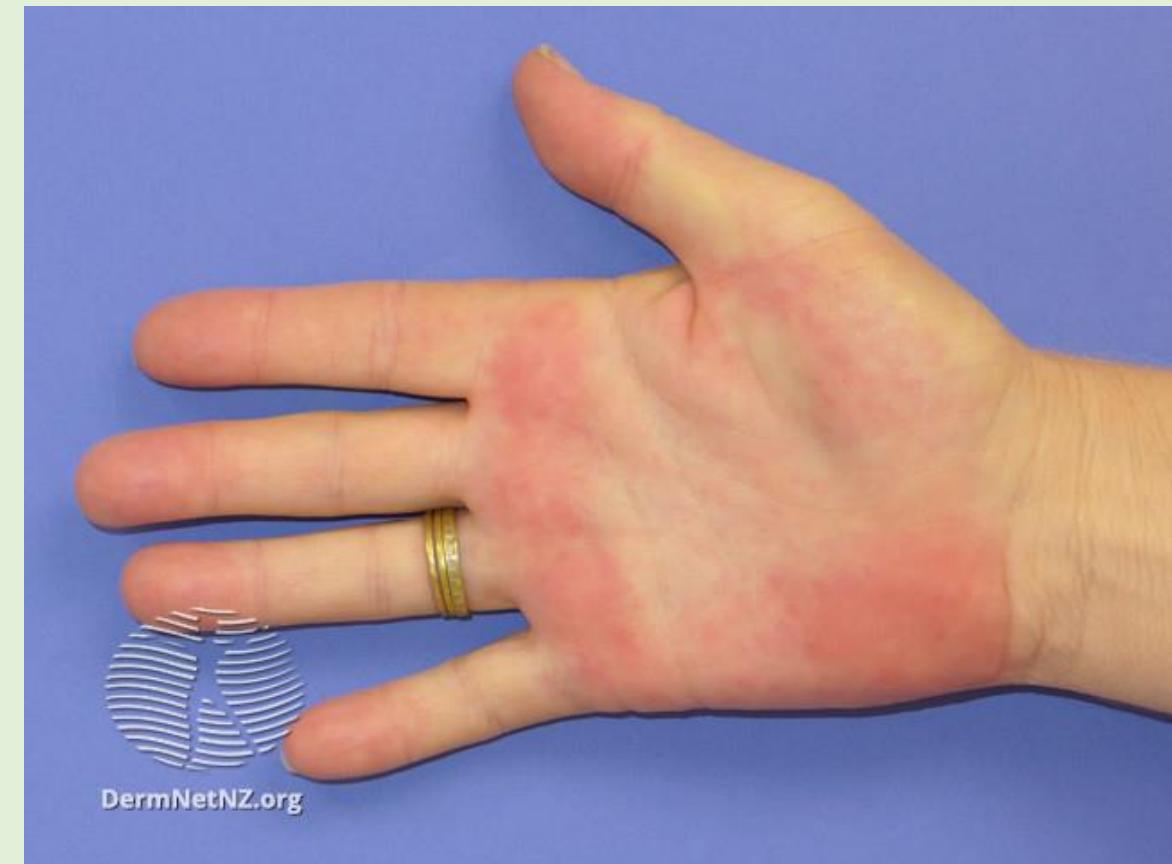

DermNetNZ.org

DermNetNZ.org

DermNetNZ.org

DermNetNZ.org

Systemic Sclerosis/Scleroderma

- Limited cutaneous (formerly CREST) to severe systemic
- Morphea
 - Localized scleroderma – atrophic scar with dyspigmentation
 - Smooth, hard, somewhat depressed, yellowish white or ivory-colored lesions
 - Common on trunk
- Acrosclerosis
 - Sclerodactyly – tight skin over hands, digits
 - Sclerosis of skin
 - Poikiloderma
 - Telangiectatic mats
 - Calcinosis cutis
- Systemic findings – abnormal esophageal motility, pulmonary fibrosis, renal disease

Dermatomyositis

CUTANEOUS AND SYSTEMIC FINDINGS IN DERMATOMYOSITIS

Cutaneous

- Heliotrope sign and edema
- Nail-fold changes
- Photodistributed eruption
- Poikiloderma and V-neck sign or shawl sign
- Gottron's sign
- Gottron's papules
- Raynaud's phenomenon
- Calcinosis cutis
- Scalp erythema and scale
- Holster sign

Systemic

- Symmetric, inflammatory myopathy*
Triceps and quadriceps usually affected first and may be tender
- Interstitial lung disease
- Gastrointestinal
Dysphagia (upper esophagus),
gastroesophageal reflux (lower esophagus)
In children, vasculopathy of the GI tract
- Cardiac disease
Arrhythmias
- Inflammatory polyarthritis

* May be absent (amyopathic dermatomyositis) or subtle (hypomyopathic dermatomyositis).

Hypothyroidism

DermNetNZ.org

DermNetNZ.org

Hypothyroidism

- Sparse and brittle hair, which comes out in handfuls
- Loss of hair in the outer third of eyebrows
- Slow growing, ridged and brittle nails
- Myxedema, resulting in puffy face, eyelids, hands and feet; a presentation of mucinosis
- Delayed wound healing

Myxedema

- Systemic mucinosis
- Caused by a severe lack of thyroid hormone
- Skin is rough and dry
- Facial skin is puffy – dull, flat expression
- Macroglossia, broad nose
- Chronic periorbital infiltration
- Carotenemia
- Diffuse hair loss – lateral 1/3 of eyebrows
- Onycholysis

Carotenemia

Myxedema

Hyperthyroidism

- Thyroacropathy

DermNetNZ.org

Calciphylaxis

Gastrointestinal Disease

- Inflammatory bowel disease
- Celiac disease
- Peutz-Jeghers syndrome
- Liver disease

Ulcerative colitis

- Aphthous ulcers and erythema nodosum during exacerbations
- Pyoderma gangrenosum – trauma induced necrotic violaceous ulcer that is painful, starts as a small pustule, papule or bullae and then the skin breaks down into the ulcer which deepens and widens rapidly, edge of ulcer is purple and undermined
- Pathergy test – a skin prick test causing a papule, pustule or ulcer
- Swab and culture (although not usually bac)
- Neutrophilic inflammatory infiltrate
- Positive ANCA
(antineutrophil cytoplasmic antibody)

Pyoderma gangrenosum

Crohn

- Aphthous ulcers
- Angular cheilitis
- Erythema nodosum
- Skin tags
- Perianal fissures and abscesses
- Sweet syndrome
- Small vessel vasculitis

DermNetNZ.org

Sweet Syndrome

Acute Febrile Neutrophilic Dermatosis

Celiac – Dermatitis herpetiformis

DermNetNZ.org

DermNetNZ.org

Peutz-Jeghers Syndrome

- Perioral melanotic freckles
 - Also gingiva, buccal and genital
- GI polyps
- Early cancer risk
 - Colon, suodenum, pancreas, breast, thyroid, lung
- Abdominal pain, bleeding, intussusception
- Regular, frequent GI screening

Lichen planus

DermNetNZ.org

DermNetNZ.org

Neurologic System

- Seborrheic dermatitis
- Neurofibromatosis
- Sturge-Weber syndrome
- Psychogenic
 - OCD
 - Lichen simplex chronicus
 - Trichotillomania
 - Skin picking
 - Nail tick deformity

DermNetNZ.org

Pruritus

- Cholestasis
- Renal failure
- DM
- Sjogren
- Lymphoma
- Mastocytosis
- Polycythemia vera
- Hyperthyroidism, hyperparathyroidism
- Brain tumor
- Neuropathic itch
- Anxiety, depression – prurigo nodularis

Cutaneous COVID-19

- Exanthema
- Vascular manifestations
- Acral popular eruption
- Urticarial eruption

List at least 2 conditions associated with erythema nodosum.

List 2 skin findings associated with liver disease.

Calciphylaxis and perforating dermatosis are associated skin signs for which systemic condition?
